Subject:

10/735,419

For 10/735,419, pls search and interference search:

SID 10: against the NT and AA data bases.

THANKS!!

Sheridan Swope, Ph.D. Patent Examiner, AU 1652 Recombinant Enzymes 571-272-0943 (voice) E02B71 Remsen Bld (Office) E02C70 Remsen Bld (Mailbóx) Noart

(first entry)

Wakarchuk WW;

Novel glycosyltransferase polypeptides and polynucleotides useful for biosynthesis of ganglioside and ganglioside mimics, as diagnostic reagents and as immunogen for producing antibodies.

A reaction mixture for the synthesis of a sialylated oligosaccharide is useful for synthesising sialylated oligosaccharide such as ganglioside, lysoganglioside or their mimics. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of

```
genes involved in ganglioside mimetic synthesis. Antibodies raised
against the glycosyltransferases are also useful for analyzing the
expression patterns of these genes involved in pathogenesis. The nucleic
caids are also useful for designing antisense oligomucleotides for
inhibiting expression of the Campylobacter enzymes that are involved in
the blosynthesis of ganglioside mimics that can mask the pathogens from
the host's immune system. The oligosaccharides are useful as diagnosing
reagents or as therapeutics and as immunogens for producing antibodies.
Bacterial glycosyltransferase can be used to catalyse the formation of
cligosaccharides that are identical to the corresponding mammalian
structures and are easier and less expensive to produce in large
quantity, compared to the mammalian glycosyltransferase. The bacterial
crigin of the enzymes facilitates expression of large quantities of the
enzymes using relatively inexpensive prokaryotic expression systems.
(Updated on 12-SEP-2003 to standardise OS field)

Campylobacter jeluni proteins. The C. jejuni proteins of the invention may be either an acyltransferase; glycosyltransferase; GalNac (N-Actylgalactosamine) transferase; glalactosyltransferase; GalNac (N-Actylgalactosamine) transferase; glalactosyltransferase; sialic acid synthese; cytidine 5'-monophosphate (CMP) sialic acid synthetase; acetyltransferase. The C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis, studying ganglioside mimetics, and for designing oligonucleotides to inhibit expression of Campylobacter enzymes involved in the blosynthesis of ganglioside mimetics that can mask the pathogen's from the host's immune system. The C. jejuni oligosaccharides of the invention may be used as diagnostic reagents (e.g. to locate areas of inflammation or tumour metastasis). The present amino acid sequence represents a Campylobacter jejuni protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

useful for synthesising stalylated oligosacchaide such as ganglioside.

lysoganglioside or their mimics. Glycosyltransferases are useful for
chemo-enzymatic synthesis of oligosaccharides including gangliosides and
other oligosaccharides that have bloological activity. The enzymes and
nucleic acids that encode them are useful for studies of the pathogenesis
mechanisms of organisms that synthesize ganglioside mimics, such as C.
jejuni and the nucleic acids are used as probes to study expression of
genes involved in ganglioside mimetic synthesis. Antibodies raised
genes involved in ganglioside mimetic synthesis. The nucleic
acids are also useful for designing antisense oligonucleotides for
inhibiting expression of these genes involved in pathogenesis. The nucleic
cacids are also useful for designing antisense oligonucleotides for
inhibiting expression of the Campylobacter enzymes that are involved in
the biosynthesis of ganglioside mimics that can mask the pathogens from
the bhost, immune system. The oligosaccharides are useful as diagnosing
the host's immune system. The oligosaccharides are useful as diagnosing
the host's immune system of the oligosaccharides for producing antibodies.
Bacterial glycosyltransferase can be used to catalyse the formation of
cligosaccharides that are identical to the corresponding mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          quantity, compared to the mammalian glycosyltransferase. The bacterial origin of the enzymes facilitates expression of large quantities of the enzymes using relatively inexpensive prokaryotic expression systems. The invention comprises the amino acid and coding sequences of Campylobacter jejuni proteins. The C. jejuni proteins of the invention may be either an: acyltransferase; glycosyltransferase; GalNAc (N-Acetylgalactosamine) transferase; galactosyltransferase; GalNAc (N-Saily ansferase; sialic acid synthase; cytidine 5'-monophosphate (CMP) sially acid synthetase; acetyltransferase The C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis, studying ganglioside mimetics, and for designing oligonucleotides to inhibit expression of Campylobacter enzymes involved in the biosynthesis of a ganglioside mimetics that can mask the pathogen's from the host's immune diagnostic reagants (e.g. to locate areas of inflammation or tumour metastesis). The present amino acid sequence represents a Campylobacter jejuni protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              242

Glycosyltraneferases are useful for chemo-enzymatic synthesis of oligosaccharides are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize apmolioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The nucleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter nazymes that are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the host's immune system. The oligosaccharides are useful as diagnosing

          sialytransferase; sialic acid synthase; cytidine 5' monophosphate (CMP) sialic acid synthase; cytidine 5' monophosphate (CMP) sialic acid synthetase; cytidine 5' monophosphate (CMP) sialic acid synthetase; acetyltransferase. The C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis, studying ganglioside mimetics, and for designing oligonucleotides to inhibit expression of Campylobacter enzymes involved in the biosynthesis of ganglioside mimetics that can mask the pathogen's from the host's immune system. The C. jejuni oligosaccharides of the invention may be used as diagnostic reagents (e.g. to locate areas of inflammation or tumour metastasis). The present amino acid sequence represents a Campylobacter jejuni protein of the invention
                                                                                                                                                                                                                                                                                                                                         YFNORITSGVYMCTVAIALGYKEIYLSGIDFYQNGSS-YAFDTKQKNLLKLAPNFKNDNS 183

A reaction mixture for the synthesis of a sialylated oligosaccharide is useful for synthesising sialylated oligosaccharide such as ganglioside, lysoganglioside or their mimics. Glycosaccharide such as ganglioside, chemo-enzymatic synthesis of oligosaccharides, including gangliosides and chemo-enzymatic synthesis of oligosaccharides, including gangliosides and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression of these genes involved in pathogenesis. The nucleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter enzymes that are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the biosynthesis of ganglioside mimics that can mask the pathogens from the biosynthesis of ganglioside mimics that can mask the pathogens from the biosynthesis of ganglioside mimics that can mask the formation of reagents or as therapeutics and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of cligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large corrigin of the enzymes facilitates expression of large quantities of the corresponding mammalian critical corrigin of the enzymes facilitates expression of large quantities of the corrigin of the corrigin or probacterials are also are seasier and easier and seasier and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   127

                                                                                                                                                                                                                                                                                                                                                                         The invention comprises the amino acid and coding sequences of Campylobacter jejuni proteins. The C. jejuni proteins of the invention may be either an acyltransferase; glycosyltransferase; GalNAc (N-Acetylgalactosamine) transferase; gladcosyltransferase; GalNAc (N-sialyltransferase; sialic acid synthase; cytidine 5'-monophosphate (CMP) sialyltransferase; sialic acid synthase; cytidine 5'-monophosphate (CMP) salalic acid synthase; acetyltransferase. The C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis, studying ganglioside mimetics, and for designing oligomucleotides to inhibit expression of Campylobacter enzymes involved in the biosynthesis of expression of Campylobacter enzymes involved in the biosynthesis of spanglioside mimetics that can mask the pathogen's from the host's immune system. The C. jejuni oligosaccharides of the invention may be used as diagnostic reagents (e.g. to locate areas of inflammation or tumour metactasis). The present mino acid sequence represents a Campylobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LIQNEEYNIENIVCSTINLEYIDGFQFVDNFELYFSDAFLGHEIIKKLKDFFAYIKYNEI 127

useful for synthesising sialylated oligosaccharide is useful for synthesising sialylated oligosaccharide such as ganglioside, lysoganglioside or their mimics. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The nucleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter enzymes that are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the host's immune system. The oligosaccharides are useful as diagnosing reagents or as therapeutics and as immunogens for producing antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    reagents or as therapeutics and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of oligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The bacterial origin of the enzymes facilitates expression of large quantities of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8 LVCGNGPSLKNIDYKRLPKQFDVFRCNQFYFEDRYFVGKDVKYVFFNPFVFFEQYYTSKK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises the amino acid and coding sequences of Campylobacter jejuni proteins. The C. jejuni proteins of the invention may be either an acytransferase; glycosyltransferase; GalNAc (N-Acetylgalactosamine) transferase; galactosyltransferase; sialic acid synthase; cytidine 5'-monophosphate (CMP) siallc acid synthetase; acetyltransferase. The C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis; studying ganglioside mimetics, and for designing oligonucleocides to inhibit expression of Campylobacter enzymes involved in the biosynthesis of

The invention comprises the amino acid and coding sequences of Campylobacter jejuni proteins. The C. jejuni proteins of the invention may be either an acyltransferase; glycosyltransferase; GalNAc (N-Acetylgalactosamine) transferase; galactosyltransferase; galactosyltransferase; sialic acid synthase; cytidine 5'-monophosphate (CMP) sialyltransferase; acetyltransferase; rhe C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis, studying ganglioside mimetics, and for designing oligonucleotides to inhibit ganglioside mimetics that can mask the pathogen; sfrom the host's immune system. The C. jejuni oligosaccharides of the invention may be used as
                                                                                                                                                                                                                                                                              242

                       Acetylgalactosamine) transferase; galactosyltransferase; salalytransferase; sialic acid synthase; cytidine 5-monophosphate (CMP) sialy lytransferase; sactyltransferase. The C. jejuni DNA and protein sequences of the invention are useful for ganglioside synthesis, studying ganglioside mimetics, and for designing oligomorlectides to inhibit expression of Campylobacter enzymes involved in the biosynthesis of ganglioside mimetics that can mask the pathogen's from the host's immune system. The C. jejuni oligosaccharides of the invention may be used as flagnostic reagents (e.g. to locate areas of inflammation or tumour metastasis). The present amino acid sequence represents a Campylobacter jejuni protein of the invention

The present invention relates to a method for producing alpha-2,3/alpha-2,8-8-sialyltransferase can be used in a method for producing sialic acid-containing complex sugars from an oligosaccharide substrate using a culture of a microorganism transformed with DNA encoding alpha-2,3/alpha-2,8-sialyltransferase, or an extract of the culture. The present sequence is a protein sequence for alpha-2,8-sialyltransferase from Pasteurella multocida

                                                                                                                                                                                                                                                                                                            8
                                           The present sequence represents Campylobacter jejuni alpha-2,3-
sialyltransferase which is encoded by the cst-I gene. The alpha-2,3-
sialyltransferase protein is useful for producing desired carbohydrate
structures by contacting the acceptor molecule (which has a terminal
galactose residue) with an activated sialic acid molecule. The terminal
galactose residue is linked to a second residue (Glc or a GlcNac, or
GlcNac or GalNac) in the acceptor molecule through a beta-1,3 or beta-1,4
linkage, respectively. The activated sialic acid is CMP-Neu5Ac. The
polymucleotides and polypeptides facilitate the improved production of
desired structures and nucleic acids encoding sialyltransferases
                                                                                                                                                                                                                                                                                                                                                                                                                                  EQYYTSKKLIQNEEYNIENIVCSTINLEYIDGFQFVDNFELYFSDAFLGHEIIKKLKDFF 119

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium faliparum.

Chromosome 2 of the human malarial parasite, Plasmodium faliparum.

Chromosome 2 of the human malarial parasite, Plasmodium faliparum.

Chromosome 2 of the human malarial parasite, Plasmodium faliparum.

Chromosome 2 of the development of vaccines against P. faliparum infection comprising (I) or the development of vaccines against P. faliparum infection.

(II) are useful for the development of vaccines against P. faliparum infection.

(II) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. faliparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of infection with P. faliparum infection, or they can be used to identify drug resistance IP. faliparum. Sequencing of the proteins concoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352 invention, but which are not specifically mentioned within the

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 10, Sequence 10, Sequence 10, Sequence 3, Sequence 3, Sequence 3, Sequence 3, Sequence 7, Sequence 7, Sequence 5, Seq

Sequence 3, Application US/10303134

Sequence 3, Application US/10303134

GENERAL INFORMATION:

APPLICANT: Gilbert, Michel

APPLICANT: Matarchuk, Warren W.

APPLICANT: National Research Council of Canada

TITLE OF INVENTION: Campylobacter Glycosyltransferases for Biosynthesis of

TITLE OF INVENTION: Gangliosides and Ganglioside Mimics

FILE REFERENCE: 019633-00011US

CURRENT APPLICATION NUMBER: US/10/303,134

CURRENT FILING DATE: 2002-11-21

PRIOR APPLICATION NUMBER: US 60/118,213

PRIOR FILING DATE: 1999-02-01

PRIOR FILING DATE: 1999-02-01

PRIOR SPLICATION NUMBER: US 09/495,406

SPRIOR FILING DATE: 1999-02-01

PRIOR SEQ ID NOS: 49

SOFTWARE: Patentin Ver. 2.1

APPLICANT: Gilbert, Michel
APPLICANT: Gilbert, Michel
APPLICANT: Wakarchuk, Warren W.
APPLICANT: Wathonal Research Council of Canada
TITLE OF INVENTION: Campylobacter Glycosyltransferases for Biosynthesis of
TITLE OF INVENTION: Gangliosides and Ganglioside Mimics
CURRENT APPLICATION NUMBER: US/10/303,162
CURRENT FILING DATE: 2002-11-21
PRIOR APPLICATION NUMBER: US 60/118,213
PRIOR PILING DATE: 1999-02-01
PRIOR APPLICATION NUMBER: US 09/495,406
PRIOR PILING DATE: 1999-02-01
PRIOR APPLICATION NUMBER: US 09/495,406
PRIOR PILING DATE: 1999-02-01
NUMBER OF SEQ ID NOS: 49
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 5
LENGTH: 291
                                                                                                                   TYPE: PRT
ORGANISM: Campylobacter jejuni
ORGANISM:
CAPENTURE:
OTHER INFORMATION: bifunctional alpha-2,3/alpha 2,8-sialyltransferase
OTHER INFORMATION: Campylobacter sialyltransferase II (catII) from C. jejuni
OTHER INFORMATION: serotype 0:10 (ORF 7a of lipooligosaccharide (LOS)
OTHER INFORMATION: biosynthesis locus)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          OTHER INFORMATION: bifunctional alpha-2,3/alpha 2,8-sialyltransferase OTHER INFORMATION: campylobacter sialyltransferase II (cstII) from C. jejuni OTHER INFORMATION: serotype 0:10 (ORF 7a of lipooligosaccharide (LOS) OTHER INFORMATION: biosynthesis locus)

Sequence 10, Application US/09816028A

Facent No. US2002042369A1

GENERAL INFORMATION:
APPLICANT: Gilbert, Michel
APPLICANT: Nakarchuk, Warren W.
APPLICANT: Nakarchuk, Warren W.
TITLE OF INVENTION: Campylobacter Glycosyltransferases for Biosynthesis of TITLE OF INVENTION: Ganglioside and Ganglioside Mimics
TITLE OF INVENTION: Gangliosides and Ganglioside Mimics
TITLE OF INVENTION WABER: US/09/816,028A

CURRENT APPLICATION NUMBER: US 60/118,213

FRIOR APPLICATION NUMBER: US 60/118,213

FRIOR APPLICATION NUMBER: US 09/495,406

FRIOR PILING DATE: 1099-02-01

FRIOR FILING DATE: 2000-01-31

NUMBER OF SEQ ID NOS: 49
